

**SIMATS ENGINEERING
ASSESSMENT TOOL 2**

COURSE NAME: Fundamentals of Data Science

COURSE CODE: DSA04

COURSE OUTCOME COVERED

CO1: Analyse the role of data science, facets of data, and the big data ecosystem for informed decision-making. (BL4)

QUESTIONS: 05

Total Marks: 100

Annexure A

CONCEPT MAPPING

Code of Conduct:

I T.V.S. Jagadees / 192472146 (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.
I understand that any violation of academic integrity rules will result in disciplinary action.

T.S.i
Signature of the student:

Annexure A

Concept Mapping

1. A college wants to analyze student performance using attendance records, internal marks, assignment scores, and final exam results. Draw a concept map showing the Data Science process from data collection to data transformation.
2. A hospital collects patient details from registration forms, lab reports, medical devices, and doctor notes. Construct a concept map showing the different data collection sources and how they are used for analysis.
3. An online shopping company finds missing customer details, duplicate orders, wrong product entries, and unusual purchase amounts in its dataset. Draw a concept map showing the data cleaning steps required before analysis.
4. A smart city project collects traffic data from CCTV cameras, GPS devices, sensors, and mobile applications. Prepare a concept map showing how data from multiple sources can be integrated into a single dataset.
5. A bank wants to prepare customer data for loan approval prediction. The dataset contains income, age, job type, loan amount, and credit score. Draw a concept map showing suitable data transformation techniques such as encoding, normalization, and feature scaling.

RUBRICS FOR CALCULATION

Concept Mapping					
Criteria	Weightage	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Concept Identification	25%	Identifies all key concepts from literature accurately and comprehensively	Identifies most key concepts with minor omissions	Identifies limited concepts; some are irrelevant or missing	Fails to identify essential concepts
Linkages	25%	Establishes clear, meaningful, and accurate relationships between concepts	Shows correct relationships with minor gaps	Relationships are weak, unclear, or partially incorrect	No meaningful relationships established
Organization	20%	Concepts are well-structured hierarchically with logical flow and grouping	Mostly organized with minor structural issues	Some organization but lacks clear hierarchy	No logical organization or structure
Integration of Literature	20%	Integrates multiple studies effectively to show connections and comparisons	Shows some integration of literature	Limited integration; mostly isolated concepts	No integration of literature evidence
Clarity	10%	Concept map is clear, neat, visually structured, and easy to interpret	Generally clear with minor readability issues	Clarity is reduced; difficult to interpret in parts	Poorly presented and hard to understand

CO1-ASSESSMENT TOOL -2 Concept Map

QUESTIONS : 5

MARKS : 50

Q No	Concept Identification (25%)	Linkages (25%)	Organisation (20%)	Integration of Literature (20%)	Clarity (10%)	Total Score (100%)
1	25/2.5	25/2.5	1/2.0	1/2.0	0/1.0	7/10
2	25/2.5	25/2.5	1/2.0	1/2.0	0/1.0	7/10
3	25/2.5	25/2.5	2/2.0	1/2.0	1/1.0	9/10
4	25/2.5	25/2.5	2/2.0	1/2.0	1/1.0	9/10
5	25/2.5	25/2.5	2/2.0	1/2.0	1/1.0	9/10
Overall Rubrics Value	125/12.5	125/12.5	8/10	5/10	3/10	44/50
	25/25	25/25	10/20	10/20	6/10	82/100

Hospital Data Collection & Analysis

1. Data Sources

- * Medical Devices (monitors, sensors, imaging machine)
- * Doctor Notes
- * Lab reports

2. Concept map

Shows different data collection sources and how they are connected

A hospital collects patient information from various medical devices and doctor notes.

4. Data Transformation

- * Clean and validate data
- * Remove errors & duplicates
- * Converts into a consistent.

3. Data Collection

- * collect patient data
- * And store it in a central system.

5. Data Analysis

- * Identify patterns & trends
- * Generate insight

6. Uses of Analysis

- * Improve patient care
- * Plan treatment (+)
- * Monitor health outcomes

Q3. Data Cleaning Steps in Online Shopping Dataset

Key Takeaway ★
Clean data
improves accuracy, reliability
and performance

Step involved:

1. Raw E-commerce Dataset
 - * Contains customers details, orders, products and transaction
2. Handling Missing Customer Detail
 - * Fill missing values using mean/median/mode
 - * Or remove incomplete records.
3. Removing Duplicate Orders
 - * Identify duplicates using Order ID
 - * Remove repeated entries to avoid incorrect analysis
4. Correction Wrong Product entries
 - * Fix incorrect product names, categories, or prices
 - * Ensure consistency in product data
5. Handling Unusual Purchase Amount
 - * Detect using Z-score or IQR
 - * Treat by capping transforming or removing
6. Data Validation
 - * Consistency check
 - * Accuracy check
 - * Format check
7. Cleaned Dataset
 - * High-quality, reliable data
8. Ready for Analysis
 - * Used for decision-making and business insights.

Q4. Integrating Multiple Data Source in Smart City project

Step involved:-

1. Multiple Data Source

- * CCTV camera (video data)
- * GPS device (location)
- * Mobile application

2. Data collection

- * Gather raw data from all source

3. Data Preprocessing

- * Remove noise
- * Handle missing value
- * Correct errors

4. Data Transformation

- * Convert into common format
- * Normalize units
- * Aggregate data

5. Data integration

- * Extra $\rightarrow$ Transform $\rightarrow$ Load
- * combining cleaned data into one system

6. Central Database

- * Store integrated data securely

7. Unified dataset

- * Single, consistent dataset

Q5. Data Transformation for Loan Approval Prediction

Steps involved:-

Data transformation prepare raw data for machine learning model.

Encoding:-

- * Convert job type into numbers

- * Methods:

 - Label encoding

 - One-hot encoding

Normalization

- * Scale values b/w 0 & 1

- * Helps algorithm sensitive to scale

Features Scaling (Standardization)

- * Mean = 0, standard deviation = 1

- * Improves model performance

Feature Engineering :

- * Create new features

- * Select important feature

- * Remove irrelevant data

Transformation data

- * Clean, consistent, model-ready data

Loan Approval Prediction

- * Output → approved, risk assessment
better decision making.
